EDUCATION

University of Victoria

Bachelor of Software Engineering

Victoria, BC

Aug. 2026

EXPERIENCE

Junior QA Analyst Co-op

June 2025 – Apr. 2026

Journal Technologies

Victoria, BC

- Drove regression, manual, and exploratory testing across releases; spot-checked production and validated tickets against expected behavior to catch defects early
- Built and maintained TypeScript integration tests to raise coverage and keep regressions from shipping
- Contributed production TypeScript to core application features in addition to test automation
- Automated recurring QA spot checks with Java and Selenium, cutting runtime from 15 minutes to 5 (~66% faster)
- Partnered with QA and engineering to reproduce issues, verify fixes, and close bugs with clear handoffs
- Authored test cases, run notes, and actionable bug reports so developers could fix issues with minimal back-and-forth

Full Stack Software Developer Co-op

Jan. 2025 – Apr. 2025

Certispec Services Inc.

Vancouver, BC

- Crafted responsive Next.js UIs that stayed maintainable as requirements shifted
- Centralized client state with Zustand alongside hooks and local state where it fit best
- Introduced API pagination for large lists, shrinking payloads and improving perceived load time on heavy pages
- Wrote PostgreSQL queries using JSONB where it reduced joins and simplified evolving schemas
- Hardened REST endpoints with OAuth token handling and validation before data left the server
- Closed tickets end-to-end: React components on the front, service and persistence changes on the back, plus production bug fixes

Software Developer Co-op (Python)

Sep. 2021 – Dec. 2021

University of Victoria, Department of Civil Engineering

Victoria, BC

- Created dashboards for graduate students using Dash and React
- Used Git for version control and resolving merge conflicts
- Built an API that downloaded ZIP archives of technical data by country or province from the University of Victoria website

PROJECTS

HealthEngine | Next.js 15, TypeScript, Prisma, Tailwind, shadcn/ui, iron-session

- Built a full-stack fitness tracker (healthengine.shayvanpelt.com) for logging workouts (calendar, exercises, sets, and RPE), calories, weight, and per-user goals backed by Prisma and typed REST handlers
- Implemented passwordless auth with email OTP, encrypted iron-session cookies, Edge middleware for route protection, and Resend for transactional email in production
- Delivered a mobile-first dashboard with Recharts trends, unit-aware display, and PWA configuration (manifest, viewport) for add-to-home-screen installs

Discord Economy Bot | Python, discord.py, SQLite

- Shipped a Discord bot that runs interactive chat games (roulette, blackjack, coinflip) with clear rules and user-facing feedback
- Persisted per-user virtual currency and game outcomes in SQLite so balances survive deploys and restarts
- Structured commands and handlers so new games and economy rules could be added without rewriting core flow

TECHNICAL SKILLS

Languages: C, C#, Python, Java, TypeScript, JavaScript, SQL (PostgreSQL, SQLite)

Frameworks & libraries: React, Next.js, Dash, Tailwind CSS, Zustand, Redux, discord.py

Tools: Git, Agile, Docker, REST APIs, Selenium, OAuth

Embedded: FreeRTOS, STM32 microcontrollers

Operating systems: Windows, macOS, Linux
